The feeder roads project has ended and instead there is a stronger focus on the agribusiness and entrepreneurship ecosystem. In both Benibiz and ACMA there is a strong focus on support to young entrepreneurs, both men and women, and improving the involvement of municipalities.

**Assessment of the results achieved across the entire result area 2**

The project aimed to speed communities in adopting practices which can increase and enhance the wealth of the land. The implementation of some of these interventions, for example the use of solid and sustainable harvesting techniques and the introduction of a digital learning platform, has been successful. However, the level of impact achieved in the second year has been lower than expected, despite some delays due to political decision-making about the role of rural land plans under the new Land Act.

**Assessment of the results achieved across the entire result area 3**

The project has made significant progress in achieving its goals. The number of family farms with increased productivity or income has exceeded the target. The number of family farms directly reached has been higher than expected. The project has also successfully supported the development of a national cadastre and introduced on-demand advisory services, which can eventually be commercially managed. These applications are expected to be in use by 2020, which will transform the activities from order to improve the business climate, for example to discuss local taxes (official and unofficial) and regulations. More emphasis is now placed on production than in the past to contribute more to increasing agricultural productivity and income. ICT4Ag services were not calculated. Since we are expecting that many of these services will be delivered in a digital platform, some numbers are showing here are not in compliance with the targeted results. The number of beneficiaries is lower than in previous years, as the project has been working to improve land rights to land. The embassy has been in discussion with ANDF (the newly established land administration agency) to understand how the development of a national cadastre can be supported. Kadaster International has conducted several missions to scope these possibilities and has signed a MoU with ANDF. Overall results are higher than expected, despite some delays due to political decision-making about the role of rural land plans under the new Land Act.

The number of family farms with increased income or production is part of the Jatropha project, which strengthens the jatropha chain (biofuel), with potential applications in aspects from production to soap to electricity. The number of family farms with increased revenues does not give an overall picture of the success of the Jatropha project, as it may be too early to measure the impact on the business climate and overall productivity. In collaboration with the Jatropha project, the BZ team has been working to improve the business climate, for example by discussing local taxes (official and unofficial) and regulations. Some farmers have seen increased production due to the project, which has contributed to improving productivity and income. ICT-based tools have been introduced for the second year and are being used in several areas, including support to the entrepreneurship ecosystem. The project aims to support the development of a digital learning platform and introduce on-demand advisory services, which are expected to be in use by 2020, which will transform the activities from order to improve the business climate, for example to discuss local taxes (official and unofficial) and regulations. Despite personal challenges, the implementation of the Netherka Fidex project, most notably the delay in execution of activities, had been a success in financial administration at the municipal level and the most of the dollar-denominated instructions the results were achieved. The project had implemented the new consolidation plan in 2017, which showed that the impact of the project was in terms of agricultural markets, increased income for households and formalization of the project. The BZ team has been working to improve the business climate, for example by discussing local taxes (official and unofficial) and regulations. More emphasis is now placed on production than in the past to contribute more to increasing agricultural productivity and income.
