

# Water

<b>Organisation</b>	<b>Date</b>	<b>Reporting period</b>
Department for Inclusive Green Growth, Ministry of Foreign Affairs, The Hague	May 2019	reports received between 15 sept 2017- 15 sept 2018

<b>Result area 1</b>	<b>IMPACT/OUTCOME/OUTPUT</b>	<b>RESULT AREA</b>
Water	Outcome	1. Water is used sustainably and equitably, ensuring the needs of all sectors and the environment

## ASSESSMENT OF RESULTS

**To what extent have the outcomes for this result area been achieved?**

The Netherlands supports organisations responsible for water management (local, national and international) in the planning, management and sustainable use of water. The Netherlands also supports projects that lead directly to better water security and water safety for citizens and businesses. Examples include projects that protect against flooding and improve the functioning of irrigation and drainage systems. Actual results were lower than planned results, but because of extremely high results in 2017, still on schedule.

Indicator	Baseline + year	Target	Result	Source
a) number of people having enough water of good quality throughout the year.		3000000	2363590	9 projects, largest share of results from 15340
<b>Assessment of the results achieved across the entire result area 1</b>		Assess achieved results compared to planning: C. Results achieved poorer than planned		
Reasons for result achieved.		The total number of people reached, include people having enough water of good quality, as well as people supported in projects for improved irrigation, drainage, improved watershed protection and protection against floods. In 2018, a total of 2.4 million people in Asia and Africa benefited from better management of river basins and safe deltas (the target was 3 million).		
Implications for planning.		The number of people reached in 2018 stayed behind the target. As the Netherlands reached a total of 10.2 million people in 2017, due to the completion of a major project by the Asian Development Bank in China, results are still on schedule and within planning. The target is 20 million people reached in 2020; until 2018 a total of 15.7 million people have been reached.		

<b>Result area 2</b>	<b>IMPACT/OUTCOME/OUTPUT</b>	<b>RESULT AREA</b>
Water	Outcome	4. People use safe drinking water and adequate sanitary facilities.

## ASSESSMENT OF RESULTS

**To what extent have the outcomes for this result area been achieved?**

This indicator is an SDG indicator, describing number of people using safely managed sanitation services including a handwashing facility with soap and water, who did not have access to these services before the start of the programmes. This result area aims to provide 30 million people with safe drinking water and 50 million people with improved sanitation by 2030. In 2018, we ensured safe drinking water for 2.2 million people and improved sanitary facilities for 3.6 million people. These figures exceeded the original target values of 1.6 million and 2.3 million respectively. This was made possible by the improved information on results and the excellent results of the UNICEF programme.

Indicator	Baseline + year	Target	Result	Source
a) number of people using safely managed drinking water services (SDG 6.1.1)		1600000	2.219.946	
b) number of people using safely managed sanitation services, including a handwashing facility with soap and water (SDG 6.1.2) (*)	n.a.	2300000	3.694.927	
<b>Assessment of the results achieved across the entire result area 2</b>		Assess achieved results compared to planning: A. Results achieved better than planned		
Reasons for result achieved.		In 2018, 2.2 million people gained access to an improved water source, significantly more than the target value of 1.6 million. In comparison, 2.5 million people received access to clean drinking water thanks to Dutch funding in 2017. A new regional programme for water and sanitation was developed with UNICEF in 2018. This is being implemented in seven countries in West Africa and the Sahel and will make a major contribution to the goal of providing 30 million people with clean drinking water between 2016 and 2030. In the reporting year, 3.6 million people gained access to improved sanitary facilities. This is higher than the original target of 2.3 million people. In comparison, 2.4 million people gained access to improved sanitation with Dutch support in 2017. In addition to installing sanitary facilities in homes, the programme also helped to build them in schools. More schools now make it easier for girls to maintain hygiene during menstruation, which is crucial to improving their participation in education. This eventually contributes to better opportunities for girls and women. The Netherlands aims to help a total of 50 million people to gain access to improved sanitation in the period 2016-2030.		
Implications for planning.		Even though the results are higher than expected, this will not influence the planning for now.
