### Lessons from the programme are:
1. Recognize the local diversity in vegetable production systems and development in an early stage of programme development to identify feasible objectives, appropriate interventions and stakeholders.
2. Experiences from vegIMPACT show that relatively cheap and short-term training interventions already can change the behavior of farmers towards Good Agricultural Practices (GAP).
3. More need for support of innovation based on the product-market continuum since not only output-oriented research is needed but also market-oriented research.

### Result of the programme:
- **Overall goal**: To improve vegetable production and marketing for smallholder farmers in Indonesia.
- **Major achievements**:
  - Over the entire programme period, more than 15,000 farmers across Indonesia have been reached in trainings, field expos and workshops.
  - In the less developed Eastern part of Indonesia (Moluccas & Moluccas Province, Maluku), farmers were reached through training programmes and oriented to the production of beef tomatoes and product branding as part of the development of ten new Product Market Combinations.
  - A mobile app MyAgri has been improved and new knowledge and information added.
  - The extension services network of FNS, just as the MyAgri app.

### Assessment of results achieved across the entire result area 3
- **Baseline results** compared to planning:
  - **Policy support**: The overall goal of the vegIMPACT programme was to improve vegetable production and marketing for smallholder farmers in Indonesia. With these objectives vegIMPACT contributed to increased food security and private sector development.
  - **Enabling environment**: The implementation of the programme was accompanied by the development of a ‘best practice’ handbook, which included lessons from the programme.
  - **Programme delivery**: The programme was implemented through a network of key stakeholders, including research institutes and companies.

### Assessment of results achieved across the entire result area 4
- **Baseline results** compared to planning:
  - **Policy support**: The main challenges faced during the programme included the need for more time to build relationships and trust among partners and to allow farmers and traders to understand and adopt the knowledge.
  - **Enabling environment**: There was a need to focus on market-oriented research and development, especially on seed potato technology and supply chain development.
  - **Programme delivery**: The programme was delivered through a network of key stakeholders, including research institutes and companies.

### Assessment of results achieved across the entire result area 5
- **Baseline results** compared to planning:
  - **Policy support**: The overall goal of the vegIMPACT programme was to improve vegetable production and marketing for smallholder farmers in Indonesia. With these objectives vegIMPACT contributed to increased food security and private sector development.
  - **Enabling environment**: The implementation of the programme was accompanied by the development of a ‘best practice’ handbook, which included lessons from the programme.
  - **Programme delivery**: The programme was implemented through a network of key stakeholders, including research institutes and companies.

### Assessment of results achieved across the entire result area 6
- **Baseline results** compared to planning:
  - **Policy support**: The main challenges faced during the programme included the need for more time to build relationships and trust among partners and to allow farmers and traders to understand and adopt the knowledge.
  - **Enabling environment**: There was a need to focus on market-oriented research and development, especially on seed potato technology and supply chain development.
  - **Programme delivery**: The programme was delivered through a network of key stakeholders, including research institutes and companies.
